Lesson Planning Guidebook

1. Types of Programming
    a. Evening Beginner Classes
        i. These classes are designed to teach participants the basics - including necessary safety requirements - of a piece of equipment in the makerspace. Participants should demonstrate safe use of the machine and pass a safety test with 100% accuracy by the end of the class. These classes are currently on Wednesday nights and cycle through 3D Printing, Laser Cutting, Sublimation, and Sewing.
    b. Evening Clubs
        i. These are slightly structured opportunities for community members with similar interests to connect and develop new skills. Often, Hub team members will guide willing community members through an activity, or provide several options of things to do while at club time.
    c. Saturday Workshops
        i. Classes and workshops that take place on a Saturday. Due to their Saturday placement, classes can often be longer and more in depth. More people are available on Saturdays, so we have a wider pool of participants to pull from.
    d. Daytime Classes
        i. Classes focused on homeschool families or adult makers that are available during the daytime.
    e. Tinker Time
        i. Unstructured makerspace time for community members to use equipment, tools, and supplies for personal projects. Hub team members are available to help troubleshoot and guide participants on their maker journey.
    f. Robotics Teams
        i. Competitive robotics teams reserve time in our space to build, maintain and test their robots. Hub team members are available to assist with team needs. All other details can be found in the robotics MOU.
2. Programming Timeline
    a. 8+ weeks before - Class subject decided
    b. 7+ weeks before - materials ordered for basic prototype
    c. 4+ weeks before - Basic prototype complete, photos taken of prototype and sent to management team, event posted on Eventbrite
    d. 3 weeks before - Lesson plan complete, shared with management team for approval
    e. 2 weeks before - all prototyping complete, materials for class ordered (if approved store list. More time is needed if materials are being ordered from a specialty store.) Run through class activity in detail with shift team.
    f. 1 week before - all course materials (powerpoint, material list, lesson plan, other resources, etc.) uploaded into appropriate folder in Google Drive

g. 2 days before - class materials prepped, stored in class bin to be kept in Clawffice, and ready for class
h. 30 minutes before - Makerspace set up for class, presentation on screen, equipment ready
